

# Cybersecurity awareness and behavioral assessment

IT SECOS

Today, your role as a business leader or an IT manager demands that you understand your current cybersecurity resilience level. You have two ways of doing that:

Execute vulnerability assessments and delve immediately into in-depth technical and operational analysis.

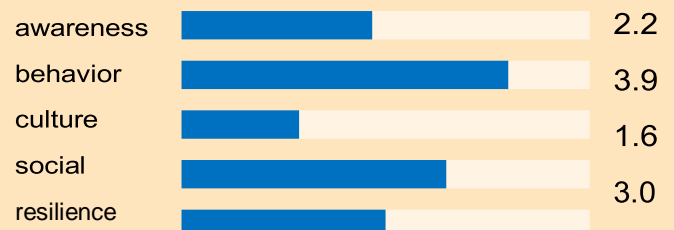

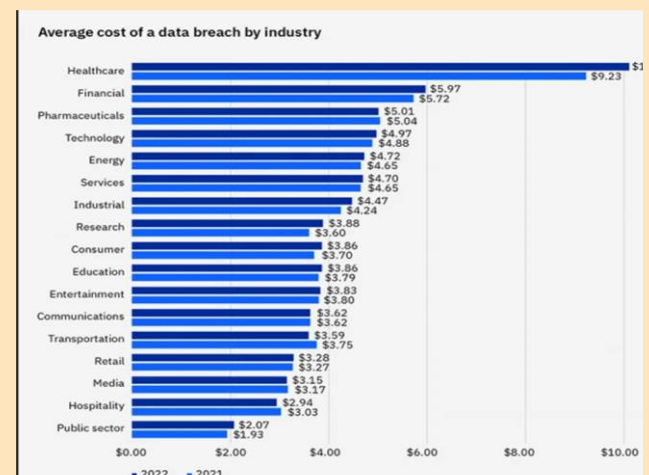

or

Take a step back and begin observing the daily interactions between employees and IT assets.

Given that between 90 and 95% of all incidents involve human actions, and **88% of data breaches are caused by human error** (Stanford Research) we suggest this approach.

We emphasize the human factor as it is the most impactful variable: it can enhance or disrupt the cybersecurity resilience resulting from the adoption of the correct mix of technologies and processes across the organization.

Our process identifies and determines the major areas of risk where to focus on to increase your cybersecurity awareness and resilience.

## What We Do

ITSECOS Cybersecurity Assessment is carried out by consultants with extensive experience in the field and a deep understanding of behavioral and organizational aspects.

Our service offers a comprehensive overview of your major risk areas at a strategic level, helping you prioritize further investigations and investments in technology, process design, and education.

This approach is holistic because it assesses not only IT technological solutions but also aspects related to self-prejudicial judgment, social and cultural habits.

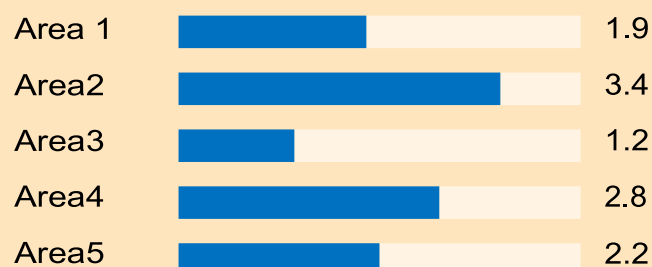

The outcome for you is a transfer of insights, an increase of awareness and knowledge to serve as a compass in management's hands.

Widening observation enables to view the whole picture and let you take informed decisions by yourself about the action plan to be adopted for strengthening the organization cybersecurity resilience.

Cybersecurity risk profile =  
 event probability  
 x vulnerability  
 x asset value

### OUR REPORT

- Insights
- Prioritization
- action plan
- Short term recommendations
- Long term recommendations

## What we offer

Included      Optional

Client Interview	✓	
Personalized survey	✓	
Processing of Collected Information	✓	
Exec summary/recommendations	✓	
Presentation of Report		✓
Cybersecurity awareness training		✓

## About Us

As a global cybersecurity consultants' entity, ITSECOS enables companies to take informed decisions, prioritize their plans and better organize their actions for protecting themselves from cyber threats.
